SIL 2

Function

The device enables the usage of HiC devices on HiD termination boards.
 The device consists of a isolated barrier and a HiD-ADP-HiC adapter.
 This isolated barrier is used for intrinsic safety applications.
 Each device channel works as a transmitter power supply or a current driver.
 The device transfers data by using a current signal.
 The device supports a bi-directional communication for SMART devices that use current modulation to transmit data and voltage modulation to receive data.
 The device is mounted on the HiD termination board.
